

Migrate social content to Drupal with ease

Many organizations run an array of disparate content management and social software tools, resulting in an excessive total cost of ownership. Drupal provides a flexible platform to address a wide range of web needs, supporting sites large and small. Yet valuable content, users, and social relationships are stuck in these legacy systems.

Acquia Migration Services enables organizations to cost effectively migrate complex content and data from legacy systems to Drupal. Our deeply experienced architects help you minimize the cost and complexity of migrating valuable content into Drupal through software tools, best practices, intelligent planning and a proven methodology. Leverage our expertise to ensure a successful migration to Drupal.

Get the big picture.

Migration Services projects can take as little as a few weeks to complete, depending on the amount of content to be migrated, the complexity of content relationships, and quality of the source data.

Acquia executes a migration project in partnership with the site's owners and development team. Specific migration activities include:

- **Migration assessment:** Review of legacy content architecture, functional requirements, and Drupal implementation plan.
- **Software migration tools:** Acquia has migration plug-ins for application sources including Vignette, WordPress, Jive, databases, and structured data sources.
- **Drupal destination configuration:** Guidance to create Drupal data fields, taxonomy terms, and user profile fields appropriate to receive migrated content.
- **Data import:** Move content and data into Drupal, with throughput monitoring and detailed source bookkeeping tracked into Drupal entity for rollback or re-import as mappings are refined.
- **Migration summary:** Acquia will summarize results from the migration effort, providing technical information for future reference.

WHO BENEFITS

- Organizations moving to Drupal from legacy web content management systems
- Community website owners migrating existing content, groups, users, and social networking relationships to Drupal-based social applications
- Site owners making the transition from custom-coded websites to the Drupal social publishing platform

Acquia Migration Services

Move forward.

Acquia's Migration Services gives you all you need to:

- **Simplify transition to Drupal.** Acquia Migration Services will help you retain valuable content from existing systems, while putting that content to more effective use in the Drupal social publishing system. Our extensive suite of software tools ensures that you can access source data easily and migrate it into Drupal in accordance with your data design needs.
- **Speed site development processes.** Eliminate the guesswork of mapping source data to Drupal fields. Track imports from source rows to Drupal entities, with ability to roll back and re-import data as designs evolve. Acquia helps move your content quickly, letting you focus on building great web experiences.
- **Reduce the cost of deployment.** Migrating content from legacy applications and data stores with Acquia reduces the cost and complexity of achieving your goals. Our approach to migration planning helps you work through architectural and project execution decisions in a way that will save you effort in the long term. In addition, our deep experience migrating large data sets to Drupal will reduce unexpected roadblocks and keep your deployment projects on schedule.

Start now.

Nobody knows Drupal migration better than Acquia.

The world's leading experts are at our disposal: Shouldn't they be at yours?
