

The Cloud platform for fast, reliable Drupal websites

Used by some of the world's largest and best-known Drupal sites, Acquia Cloud provides an optimized, performance-tuned environment for delivering Drupal-powered content and services.

Drupal platform expertise, delivered as a service.

■ High performance

Acquia Cloud is Drupal-tuned and pre-configured with advanced performance technologies including Varnish, Nginx, APC, and Memcached. Drupal sites hosted on Acquia Cloud perform better, at a much lower cost than custom-built alternatives, and benefit from Acquia's continuous platform improvements.

■ Fully managed platform

Acquia delivers your Drupal hosting platform as a service, simplifying site monitoring and eliminating operations headaches for your web team.

■ Unparalleled developer experience

Best practices are built in! Separate development, testing, and production environments, deployed automatically from Git or SVN. Drag and drop code, databases, and files between environments. Full Drush support lets you control Drupal functions from the command line. And if something goes wrong, easily roll back code or restore from automatic backups.

■ Optimized for Drupal

Because we host only Drupal websites, Acquia Cloud is tuned specifically for Drupal performance. Your site gets a high PHP memory allotment, Drupal-specific LAMP stack tuning, opcode caching, Pressflow compatibility, and much more. The result is faster rendering of dynamic content and improved site reliability.

■ Simplified Drupal infrastructure

Acquia Cloud offers everything you need to run a dynamic, high-performance, scalable Drupal website. And because Acquia delivers this infrastructure as a service, you'll reduce costs and simplify site management efforts. Backed by the Acquia Network, Acquia Cloud subscribers gain additional knowledge, training materials, tools, and cloud services to enhance their web experiences. Knowledgeable Drupalists provide support along the way.

Dev Cloud

Self-service, Drupal-tuned cloud platform for professional developers

- Battle-tested environment, configured and tuned for Drupal.
- Separate development, testing, and production environments, deployed from a source-code repository.
- Native Git and SVN support.
- Drag-and-drop interface for managing code, databases, and files.
- Drush support.
- Multiple sites per server, with support for Drupal multi-site configurations.
- Automatic nightly and single-click on-demand backups and restores.

Managed Cloud

White-glove managed service for high-traffic, business-critical Drupal websites that require enterprise-level support.

All the features of Dev Cloud, plus:

- Multi-server, clustered, high-availability environment with 99.95% uptime.
- 24/7 proactive support.
- Managed, scalable response to demand.

Acquia Cloud for fast, scalable Drupal site delivery

Acquia Network.

All Acquia Cloud customers have access to the Acquia Network, which provides a broad array of answers, tools and support, to help you create and maintain killer web experiences built on Drupal.

The Acquia Network includes the Acquia knowledge base and training materials; tools and SaaS services, including faceted search, spam blocking, and in-depth security and performance monitoring; and access to support from our team of Drupal experts via the Acquia Network.

Superior cloud support.

| |  Dev Cloud |  Managed Cloud |
|--|---|---|
| 24/7 emergency platform support | 1 hour | 1/2 hour |
| Response for non-critical issues within one business day | ✓ | ✓ |
| 99.95% up-time SLA | | ✓ |
| Emergency prioritization | | ✓ |

Unmatched Drupal support.

| |  Dev Cloud |  Managed Cloud |
|---|---|---|
| Acquia Network Forums | ✓ | ✓ |
| Unlimited support tickets | | ✓ |
| Six web tickets about any Drupal 6 or 7 issues | optional | |
| Best practices advice on Drupal security, performance, etc. | | ✓ |
| Installation, setup, configuration troubleshooting | | ✓ |
| 24x7 emergency Drupal application and custom code debugging | | ✓ |
